

## Automatic Retractable Security Cover

- Available for:
- Above Deck installation
  - Below Deck installation
  - Indoors or out

Our automatic retractable security cover (ARSC) acts as a horizontal fence keeping children and pets out of the pool while reducing debris and controlling humidity. Operated with the turn of a key, the cover retracts easily making it ideal for people who want the convenience of an automated cover or lack strength in their hands to operate one manually. All Endless Pool security covers meet stringent ASTM F1346-91 safety standards. In fact, they are capable of supporting the weight of several adults, and more importantly, a rambunctious child or two.

The Below Deck cover offers the ultimate choice in pool covers by utilizing an undertrack system which fully integrates the cover into the pool and deck. This eliminates the need to have track mounted on the pool coping surface and provides a sleeker, more streamlined installation. The cover mechanism is mounted at the front of the pool and requires our optional wireless remote control.

Compatible with most of our coping offerings, the Above Deck cover can be mounted on either the front or rear of the pool. It also includes a handy bench cover, available in 6 colors. You may choose to omit our bench and construct your own, however, for safety reasons the cover mechanism must be enclosed.

If you want to enjoy the benefits of our widely respected security cover with more ease than ever, contact us today at 800-732-8660 for more information.

Outdoor Automatic Retractable Security Cover includes pump to remove rainwater.

Below Deck Automatic Retractable Security Cover provides an elegant cover solution

### Above Deck Bench Cover Choices:

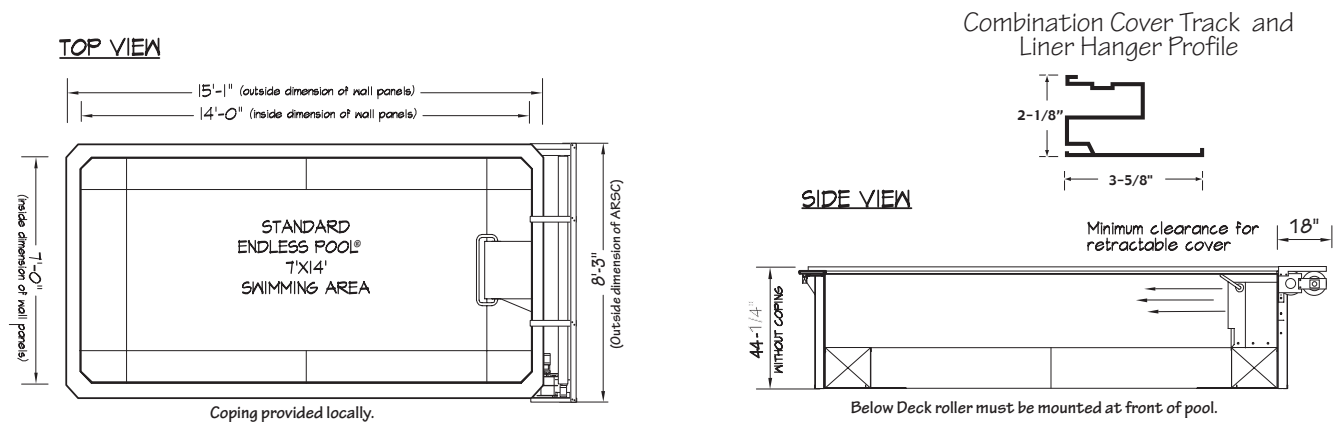

Top: (L to R) White, Tan, Gray  
 Bottom: (L to R) Brown, Charcoal, Terracotta

## ABOVE DECK MOUNT

## BELOW DECK MOUNT

### WHAT IS THE POOL COVER MADE OF?

The cover is made of heavy gauge, 16 oz. vinyl, reinforced with high strength Dacron mesh.

### DO I HAVE TO INSTALL THE COVER TRACK ON TOP OF MY COPING?

No, with our Below Deck ARSC the cover track is incorporated into the liner hanger so your cover is "hidden" below the pool coping.

### WHERE CAN I INSTALL THE OPERATING SWITCH?

The cover comes with a 3' cord and key switch that can be mounted beside the pool. Alternatively, the switch can be installed on an adjacent wall but the entire pool must be visible from the switch location.

### WHERE CAN I INSTALL THE COVER POWER UNIT?

While most pool owners choose to locate the hydraulic cover motor with the other pool equipment, the hydraulic cover power unit can be installed anywhere up to 75' from the pool.

### WHAT ARE THE ELECTRICAL REQUIREMENTS FOR THE COVER?

The hydraulic pump needs a single 20A, 110V GFCI circuit.

### WILL THE ARSC HELP TO HEAT THE POOL?

The pool cover acts as a horizontal shield preventing evaporation, the major contributor to heat loss. 70% of heat loss happens through evaporation. Covering your pool prevents evaporation and therefore heat loss.

### WILL THE POOL COVER STOP AUTOMATICALLY?

Yes, for security and safety your ARSC is supplied with a "spring-loaded", key operated switch. When you release the key the cover will stop. The cover is also equipped with a pressure relief by-pass system that will automatically stop the cover should it meet with resistance, such as an obstruction or at the end of travel as it closes. This is required by various state and local codes.

### CAN I PREVENT THE COVER FROM BEING OPERATED WHEN I'M NOT AROUND?

Yes, the ARSC is controlled with a key-operated on/off switch. Just remove the key to secure the cover in a closed position. The key may also be removed from the switch to prevent unauthorized persons and/or children from entering the pool.

### DOES THE POOL COVER COME WITH A WARRANTY?

Yes, the ARSC has the best warranty in the industry, twenty years on the mechanism and seven years on the fabric.

### SHOULD I REMOVE RAINWATER FROM MY POOL COVER?

Yes, Endless Pools provides a cover pump to remove any water which may accumulate on an outdoor installation.
